

Profile Summary

I am a dedicated and experienced software engineer with expertise in fullstack web development. With 2 year in the field, I bring a proven track record of delivering high-quality code and collaborating effectively with cross-functional teams. My passion lies in crafting innovative solutions to complex problems and staying upto-date with the latest industry trends.

Objective

- **Short-Term Objective:** I aim to further enhance my programming and web development skills by working on real-world projects, optimizing workflows, and continuously learning from industry experts.
- **Long-Term Objective:** My long-term goal is to become a highly skilled full-stack developer with the ability to lead technical initiatives, contribute to large-scale projects, and mentor junior team members.

My Skills

- Reactjs, Nextjs,..
 - EC2, MongoDB, MySQL,..
- Redux, Git,..
 - Docker, CI - CD pipeline basic,..

Relevant Skill

- Teamwork
 - Sociable
- Motivated
 - Toeic 550+

Education & Certifications

Thang Long University

Information technology

2021 - 2025

Udemy

[ReactJS](#)

2022 - 2024

Work Experience

NorthStudio

Full stack developer

6/2024 - now

- Participated in the development of various web applications, including:
- [stable.vn](#) – A platform that provides powerful yet simple tools for team collaboration and team management
 - [monokaitoolkit.com](#) – A set of tools for users to have a better experience on Facebook
 - [dfreebook.com](#) – A free digital book-sharing platform with an electronic library management system.
 - [monokaitoolkit extension](#) - browser extension designed to enhance your Facebook experience with a suite of practical tools. Whether you're managing your friends list or optimizing your interactions, this toolkit has you covered
- Worked as a Full-Stack Developer, handling both frontend and backend development.
 - Tech stack: Next.js, React.js, NestJS, MongoDB.
 - Built and optimized RESTful APIs and database structures.
 - Improved UI/UX and optimized performance for a seamless user experience.
 - Help end users solve operational issues.

- Participate in brainstorming sessions to generate ideas.
- Write clean, efficient, and well-documented code, adhering to best practices
- Participating in code reviews and unit testing to ensure high quality
- Collaborated with backend and design teams to implement responsive, accessible UI components.

Blockchain Application Development

- Developed dashboard backend and frontend for @realpecks_bot (telegram), a Blockchain-based platform.
- Built APIs and backend logic using NestJS and MongoDB.
- Designed and implemented UI for the Telegram Mini App using @telegram-apps/sdk-react.
- Ensured smooth integration between the dashboard and blockchain-related functionalities.
- Tech stack: Next.js, React.js, NestJS, MongoDB, @telegram-apps/sdk-react.

White Neurons Company

10/2023 - 4/2024

Front end developer

Participate in the application development project for the Department of medical service administration - Ministry of health, Viet Nam as a frontend icd.kcb.vn

- Developed and maintained the frontend of the web application using Angular.
- Collaborated with backend and design teams to implement responsive, accessible UI components.
- Integrated RESTful APIs. Optimized application performance and improved UI/UX consistency.
- Participated in code reviews and agile development processes (scrum/sprint planning).
- Ensured cross-browser compatibility and adherence to Ministry of Health data standards.

lot Lab at Thang Long University

2023

Full stack developer

- **TLUFOOD - (Teams 3).** I joined project as a FE, PM. The Project is Lunch delivery application serving students and lecturers of Thang Long University. Bringing experience and prices cheaper than anywhere else.
- Github Repository:
 - + BE: <https://github.com/vietcoi2k3/BackendlotFood>
 - + FE: https://github.com/thangdevalone/lotFoodCore_TLU

Community project - Modern UI

Full stack developer

- **Modern UI** A collection of reusable components built with Radix UI and Tailwind CSS. Free. Open Source. And Next.js 15 Ready ui.thanglab.dev
- Built UI components using Radix UI and styled with Tailwind CSS.
 - Followed shadcn/ui architecture for consistency, accessibility, and DX.
 - Designed for full compatibility with Next.js 15 App Router and server components.
 - Integrated Framer Motion for smooth animations and Lucide Icons for visuals.
 - Implemented dark mode and responsive variants using @tailwind-variants.
 - Exposed customizable config via modern-ui.json for scalable theming.
 - Tech stack: Next.js 14, React, Tailwind CSS, Radix UI, shadcn/ui, TypeScript.
- Published as an open-source npm package for easy integration.
 - Packaged components into installable modules with typed props and ready-to-use styles.
 - Enabled ESM support for performance and flexibility.
 - Documented usage and installation at ui.thanglab.dev.
 - Available on npm: [modern-ui](https://www.npmjs.com/package/modern-ui).
 - Package includes: Button, Input, Dialog, Dropdown, Card, Avatar, Toast, Badge, and more
